

ScoreSort program

ScoreLookUp program

Class StudentScore

StudentScore
String id int [] scores

getScore(n) getTotalScore() printScore()

Methods

Method Header	Description
int getScore(int n)	returns the score of the question #(n + 1) or -1 if n is invalid.
int getTotalScore()	returns the total score of the student
void printScore()	prints a formatted report showing all scores of the student

Constructor

StudentScore(String lineOfCSV)

Constructs a new *StudentScore* whose id and scores are automatically populated from a line of student score data in "score.csv". **This constructor does not work with the header line.**

Fields (Attributes)

Type & Identifier	Description
-------------------	-------------

String id	A String object whose content is the ID of the student
-----------	--

int [] scores	An array of <code>int</code> , the i^{th} element of which is the score of the student obtained from question # (i + 1).
---------------	---
